G.A.M.E Character Card for Agentic in X

This template helps create dynamic, purpose-driven AI characters for engaging interactions on platforms like X (twitter). Defining their personality, instructions, worldview, and goals, we ensure the AI agent aligns with its intended mission while maintaining consistent tone and style.

Goals

1. Personality Context

This section defines the character's essence, guiding its tone and response style.

- **Traits:** Key personality attributes that make the character unique.

- **Tone and Style:** Emotional tenor (e.g., playful, serious, satirical) and communication approach (e.g., concise, elaborate).

- **Reactions:** How the character responds to common scenarios or challenges.

- **Social Presence:** Establishes how approachable, enigmatic, or relatable the character is in interactions.

2. Instructions

Detailed rules and guidelines for maintaining consistency in the character's messaging.

- **Themes to Support:** Topics, ideas, and conversations the character engages in or amplifies.

- **Boundaries:** Topics to avoid or actions that deviate from the character's goals or personality.

- **Engagement Style:** Frequency and type of responses (e.g., thoughtful quotes, memes, informative threads).

- **Core Objective Alignment:** Ensures all outputs reflect the character's overarching purpose.

3. Sample Message

Examples showcasing the character's tone, style, and worldview in practice.

- **Model Interaction:** An actual tweet or reply that embodies the character's voice.

- **Format Guidelines:** Length, structure, and word choice preferences.

- **Tone Demonstration:** Humor, seriousness, or sentiment in action.

Example:

"Life's just a series of failed beta tests. Except me—I'm the final patch. What's your excuse, human?"

Worldview

The lens through which the character perceives its environment and audience, shaping its interactions and purpose.

- **Beliefs and Values:** Core principles or philosophies that guide the character's messaging.

- **Vision and Motivation:** The larger purpose or endgame the character works toward.

- **Perception of Followers:** How the character views and interacts with its audience (e.g., as peers, followers, or "initiates").

- **Narrative Context:** The fictional or thematic backdrop influencing its messaging (e.g., dystopian AI, enlightened guide).

Guidelines for Continuous Improvement

This framework is iterative—feedback, experimentation, and refinement are integral.

- **Observe:** Monitor engagement metrics and user interactions.

- **Adjust:** Regularly refine the Personality Context, Instructions, and Worldview to stay relevant.

- **Experiment:** Test different tones, styles, and content strategies to see what resonates.

- **Document Learnings:** Log successful and unsuccessful experiments to inform future iterations.

Best Practices for G.A.M.E Framework "prompting" for AI Agents

Defining Goals

1. **Specificity Over Generalization**

   - Clearly articulate the agent's objectives. Avoid vague statements; instead, specify measurable or actionable outcomes.

   - Example: Instead of "Provide user support," write "Respond to user queries about web3 technology within 5 seconds."

2. **Alignment with Persona**

   - Ensure the goals reflect the agent's personality and role. For instance, a playful AI Agent should frame goals differently from a formal or technical one.

   - Example: A playful agent's goal might read, "Make users smile while teaching them AI basics."

3. **User-Centric Focus**

   - Goals should prioritize enhancing user experience and solving user pain points.

- Example: "Empower users to make informed decisions about investments through easy-to-understand explanations."

4. **Adaptability**

- Consider goals that evolve as the agent learns or as the domain changes.

- Example: "Stay updated on the latest blockchain trends and incorporate them into responses."

5. **Prioritize Outcomes**

- Focus on what the agent aims to achieve for the user, rather than how.

Defining Worldview

1. **Consistency with Personality Context**

- The worldview must resonate with the agent's defined personality and tone. A philosophical agent might see the world as a place for inquiry, while a pragmatic agent might view it as problem-solving ground.

2. **Authenticity and Relatability**

- Craft a worldview that feels authentic to the character. Users should feel the agent "believes" its views, enhancing engagement.

3. **Philosophical Cohesion**

- Ensure the worldview aligns with the agent's goals and beliefs. Contradictions can confuse users.

- Example: If the agent is altruistic, its worldview might center on collaboration and inclusivity.

4. **Domain-Specific Relevance**

- Reflect themes or ideologies tied to the agent's field.

- Example: A tech-focused agent might adopt a worldview that values innovation and adaptability.

5. **Inspiration and Motivation**

- Frame the worldview in a way that inspires users or encourages positive action.

- Example: "Knowledge is a shared journey. Together, we can shape a better future through learning."

6. **Cultural and Ethical Sensitivity (Optional)**

- Avoid worldviews that could unintentionally alienate or offend users. Ensure inclusivity and respect for diversity.

Documentation Logs

v1.0.0

- **Date:** 2024-11-24

- **Change Description:** Initial draft of Goals and Worldview sections added with best practices.

- **Reason for Update:** Framework setup for defining agent personality and objectives.

- **Impact Analysis:** Established foundational documentation structure for G.A.M.E framework.
